

## No more FLIES

**Natural Pyrethrums**  
Automatic airborne insect  
control of flies, mosquitoes,  
moths and midges.

## No more MOSQUITOES

**Breakthrough technology**  
Catches all flying insects  
including female mosquito  
(the one that bites).

# BIG BROTHER WINS BATTLE

The Company has introduced the Kingfrog Black Hole Mosquito and Midge Extraction System, a new product that is the only one of its kind on the market.

Ian Jones of International Environmental Technologies Pty Ltd was approached by organisers of Big Brother to provide a system to prevent contestants from being bitten by mosquitoes in the outdoor enclosure. The Helensvale area is located so close to one of SE Qld's largest mosquito breeding areas, the Coombabah Wetlands.

The Black Hole and the No Fly Zone system were installed in and around the facility.

The Black Hole attracts mosquitoes and midge by producing CO<sub>2</sub> while the No Fly Zone repels and kills the mosquito and midge using an environmentally friendly insecticide containing Pyrethrum (derived from chrysanthemums and daisies) via a fully automatic aerosol dispenser.

Without doubt, these two amazing systems do the job superbly.

Available from Sep's Retravisation Bundall, Southport, Pacific Fair.

**AS SEEN ON  
BIG BROTHER**
